

The function is to store the liquid refrigerant which supplied to evaporator. Whilst, the liquid receive is capable of storing all the refrigerants in system when maintaining the system. The selection of size of liquid receiver should be based on the refrigerant volume in equipment. The capacity of liquid receiver is listed on the sheet below.

Feature & Advantages

- ◆ Designed for refrigerants storage in system operating or maintaining.
- ◆ System adjustment is allowed to suit with different condition or load.
- ◆ Have both vertical & horizontal design.
- ◆ Option available: sight glass, ball float, valve, bracket, safety valve socket, fusible plug.
- ◆ PTFE sealing gasket.
- ◆ Highly corrosion-resistant powder coating finish. Can be used in all environments, including marine applications.
- ◆ Products are compatible with HFCs, HCFCs, CFCs, as well as with their associated oils and additives.
- ◆ Design and manufacture special receivers according to customers' requirement.

BLR Horizontal Receiver

Applications

- ◆ horizontal receiver needs to be flatly installation to match the best operation.
- ◆ Max. working pressure: 35bar

60L	2-1/8	1200	840	220	273	180	60L

1) Part number with "V" means the inlet/outlet tube with valve.

2) Connection size and volume can be made according to customers' requirement.
